THIN — WITH AND WITHOUT SWASH CAPS

While the General Sherman is the largest currently living tree, it is not the largest historically-recorded tree. The Crannell Creek Giant, a coast redwood near Trinidad, California, is estimated to have been 15 to 25 larger than the General Sherman tree by volume. That tree was cut down in the mid-1940s. Another larger coast redwood, near 90,000 cubic feet, the Lindsey

The Presidential Proclamation required that a management plan be completed within three years. In January 2004, the Sequoia National Forest published and began implementation of the Giant Sequoia National Monument Management Plan, which provided for use by an international public as well as for the protection and restoration of 33 giant sequoia groves and their ecosystems.
